

Transform XML Action

This action performs an XSL Transform using the Microsoft XML parser.

XML Source File

Specify an XML file or [document](#) to read from.

XSLT and Output File

Specify the XSLT to use for the transform, and the output file to write to.

XSLT Parameters

The XSLT Parameters allows you to provide dynamic values (such as build numbers etc) to your stylesheet. These can be used to alter the output of the transform.

MSXML Parser Page

Allows you to set some options to be used when the parser loads the XML. See the [XML Parser Options](#) topic for details.
