

Release Variable Lock Action

The Release Variable Lock action can be used to release a write lock on Configuration, Project and Application variables. These are the variables that you can edit manually on the server and are referred to as Server variables. Once a write lock is released, a write lock can be acquired by other builds or editing users so they can modify the value of the server variable.

Cancel

Help

Name

A friendly name for this action (will be displayed in the [actions workflow area](#)).

Enabled

Determines if this action will be run within the relevant stage.

Variable

This drop down contains a list of Configuration, Project and Application variables accessible to the configuration. See [Variables](#) for details on how to create a variable. Note that Expression variables cannot be modified and are therefore not listed.

Verbose logging
