What are Comments?

Comments can be left on each build so that additional information can be attached to each build. When a user leaves a comment, Continua will also store who wrote the comment and when it was written. Comments have no effect on the build itself, they are used simply as another method of communication between your Continua users.

Comments can be added to a build through the **build details page** and through the **build comments page**.

Comments can be edited by clicking on the comment message.

Comments [\[View All\]](#) [\[Add Comment\]](#)

 **davem@office.vsoft.local** - 21 seconds ago [\[Delete\]](#)

This build has been pushed to production

 **davem@office.vsoft.local** - 1 second ago [\[Delete\]](#)

Scrap that, more bugs have been found. This build was removed from production

Only users with the [Add Comment permission](#) can create and delete comments from builds.

What is the Build Comments Page?

The build comments page shows all comments that are associated to a particular build. Comments can be created, edited and deleted through this page.
