

# Daily Cleanup Rules

Daily cleanup rules define which parts of the workspace and database should be cleaned up and which builds to clean up. One or more daily cleanup rules can be defined at each of the global, project and configuration levels. This allows you to, for example, clean up workspace files for a build several days before the build is removed from the build history in the database.

By default, there is one global daily cleanup rule, and this is applied to every configuration in Continua CI,

## Daily Cleanup Rules [\[Create\]](#)

Enabled	Options	Build limits			Description	
		Age	Min.	Max.		
✓	B U T S A L A W O	2 weeks	10	100	Remove database entries (excluding statistics) and all workspace files. for builds older than 2 weeks, skipping a minimum of 10 latest builds, and over a maximum of 100 latest builds.	[Edit]

however, the rule can be overridden on either the project or configuration levels.

## Daily Cleanup Rules [\[Create\]](#)

Enabled	Options	Build limits			Description	Scope	
		Age	Min.	Max.			
✓	B U T S A L A W O	2 weeks	10	100	Remove database entries (excluding statistics) and all workspace files. for builds older than 2 weeks, skipping a minimum of 10 latest builds, and over a maximum of 100 latest builds.	Global (inherited)	[Override]

Note that description text is displayed in a tooltip as you hover over each of the acronyms in the Options column

If a project overrides a daily cleanup rule, then every configuration that belongs in that project will automatically inherit the project's daily cleanup rule rather than the global daily cleanup rule.

## Daily Cleanup Rules [\[Create\]](#)

Enabled	Options	Build limits			Description	Scope	
		Age	Min.	Max.			
✓	B U T S A L A W O	2 weeks	10	100	Remove database entries (excluding statistics) and all workspace files. for builds older than 2 weeks, skipping a minimum of 10 latest builds, and over a maximum of 100 latest builds.	Project <del>Global</del>	[Remove Override] [Edit]

New cleanup rules can also be added at each level. New rules at the global level will be applied to every configuration; new rules at the project level will be applied to every configuration that belongs in that project.

## Daily Cleanup Rules [\[Create\]](#)

Enabled	Options	Build limits			Description	Scope	
		Age	Min.	Max.			
✓	B U T S A L A W O	2 Days	2	20	Remove other server workspace files (not artifacts or build logs) for builds older than 2 days, skipping a minimum of 2 latest builds, and over a maximum of 20 latest builds.	Project	[Delete] [Edit]
✓	B U T S A L A W O	2 weeks	10	100	Remove database entries (excluding statistics) and all workspace files. for builds older than 2 weeks, skipping a minimum of 10 latest builds, and over a maximum of 100 latest builds.	Project <del>Global</del>	[Remove Override] [Edit]

## Creating, Editing and Overriding Cleanup Rules

New daily cleanup rules can be defined by clicking on the **[Create]** link at the top of the rules table. Existing rules defined at the current level can be edited by clicking on the **[Edit]** link to the right of the rule. Inherited rules can be overridden by clicking on the **[Override]** link to the right of the rule. In either case, the following dialog will be displayed:

## Edit Cleanup Rule

Required Field

Enabled

### What To Cleanup

Database

Unit tests  Build  Statistics

Workspace

Artifacts  Logs  Agent workspace  Other files

Build Age

2

Weeks

*Builds older than this time period will be cleaned up.*

Minimum Builds

10

*This number of recent builds will be excluded from the cleanup.*

Maximum Builds

100

*Older builds over this number will be cleaned up regardless of build age.*

This rule will remove database entries (excluding statistics) and all workspace files. for builds older than 2 weeks, skipping a minimum of 10 latest builds, and over a maximum of 100 latest builds.

Save

Cancel

Help

### Enabled

The rule will only be run if it is enabled.

Note that you can stop an inherited daily cleanup rule from running for a configuration, or all the configurations in a project by overriding the rule and disabling the override.

### What To Cleanup

Define which build by-products to clean up with this rule.

**Database:** Tick this to completely clean up all database entries for each build. Alternatively, you may wish to choose to clean up specific entries associated with the build in the sub-categories below.

- **Unit Tests:** This will remove all unit tests associated with each build. Once unit tests have been deleted, they are no longer accessible through the [build's unit tests page](#).
- **Build:** This will delete the main entry for each build from the build table and its child tables in the database. Once a build entry has been deleted, the build is no longer accessible through any of the [build's pages](#) and will no longer appear on the [history](#) or [activity](#) page. Selecting this will automatically select the Unit Tests option and all Workspace options.
- **Statistics:** This will remove statistics entries associated with each build so they will no longer contribute to the configuration's statistics and metrics. Selecting this, will automatically select all other options.

**Workspace:** Tick this to clean up all the files in the server workspace for each build. Alternatively, you may wish to specify the types of files to clean up from these sub-categories.

- **Artifacts:** This will delete all [artifacts](#) in the server workspace for each build. Once artifacts have been deleted, they are no longer accessible through the [build's artifacts page](#).
- **Logs:** This will delete all build logs in the server workspace for each build. Once logs have been deleted, they are no longer accessible through the [build's log page](#).

- Agent workspace: This will delete all files in the agent workspace for each build.
- Other Files: This will delete any other files copied to the server workspace for each build via the [workspace rules](#).

## Build Age

All builds that are older than this time period will be removed when the cleanup runs.

## Minimum builds

This specifies the minimum number of builds that should be kept at all times, regardless of build age.

## Maximum builds

This specifies the maximum number of builds that should be kept at any one time, regardless of build age. If the number of existing builds is greater than this number then the oldest builds will be deleted.

Note that a rule will be saved, and available to be run, immediately after clicking **Save** on the Edit Cleanup Rule dialog.

## Deleting Rules

Existing rules defined at the current level can be deleted by clicking on the **[Delete]** link to the right of the rule.

### Delete Cleanup Rule

Are you sure you want to delete this rule from the cleanup policy?

Note that any overriding rules will remain, but will no longer be associated with a parent rule.

Yes  No

If deleting a project rule, then any overriding rules in configurations which belong to that project will remain on the configuration, but will no longer be an overriding rule. Likewise, if deleting a global rule, then any overriding rules in projects will remain on the project, but will no longer be an overriding rule. Also, any rules in configurations which directly override the deleted global rule, will remain on the configuration, but will no longer be an overriding rule.

## Removing Rule Overrides

Overriding rules can be removed by clicking on the **[Remove Override]** link to the right of the rule.

### Remove Overriding Cleanup Rule

Are you sure you want to remove this overriding rule from the cleanup policy?

Note that the overridden parent rule will remain.

Yes  No

Removing an overriding rule will not affect the overridden rule, which will then be inherited.

## Excluding special builds from the cleanup

Builds can be excluded from the cleanup process so that they will never be deleted. [Pinned builds](#) are marked as important so they will be ignored when the cleanup is run. Check out the [Builds page](#) for more information on pinned builds including how to pin builds.
