

Accessing The Options Settings Via Scripting

FinalBuilder allows you to modify FinalBuilder options at runtime using scripting. This makes it possible to specify the path to a third party tool at runtime so that a FinalBuilder project can for example use a different version of a third party tool.

The options objects are accessible using the `GetOptionsObject` script function. This function takes the name of the options object as a parameter. The name is the same as appears in the Options dialog. For example to access the Delphi options you would use this code (VBScript example):

```
dim delphiOptions
set delphiOptions = GetOptionsObject("Embarcadero Delphi")
delphiOptions.D6LibraryPath = delphiOptions.D6LibraryPath & " ;$(DELPHI)\Components\Lib"
```
