

Set Estimated Progress Total Action

The Set Estimated Progress Total action allows you to override the total action for the estimated progress status bar. For more information on the estimated progress calculation and display, see [EstimatedProgress](#).

The action takes a single positive numeric value, which overrides the total used for the estimated progress status bar. The field accepts variables, but the variable value must be a positive numeric value.

Details

The screenshot shows a dialog box titled "Set Estimated Progress Total" with a close button (X) in the top right corner. Below the title bar are three tabs: "General", "Runtime", and "Details", with "Details" being the active tab. The main content area is dark-themed and contains the following elements:

- A section header "Estimated total actions" with a small icon on the left and a calculator icon on the right.
- A text input field containing the variable "%PercComplete%".
- Two lines of instructional text: "This action will override the default calculation for the estimated progress on the summary screen." and "Specify a numeric value that represents the total amount of actions which will run this time."
- At the bottom, there are three buttons: "OK", "Cancel", and "Help".

Estimated total actions

The total number of actions that are to be processed in this build. The completion of each action will raise the percentage completion of the build higher.
