

Create Action Studio Documentation Action

This action will generate documentation for your actions written in Action Studio.

There are two xslt stylesheets included in the installation which can be used. They are located in the Stylesheets directory, and called "CreateASDoco_ListActions.xsl" and "CreateASDoco_DetailedQuickHelp.xsl"

Details

The screenshot shows a dialog box titled "Create Action Studio Documentation" with a close button (X) in the top right corner. The dialog has three tabs: "General", "Runtime", and "Details", with "Details" being the active tab. The "Details" tab contains two sections: "Create action studio documentation" and "Options".

Create action studio documentation

- Action studio project**: A text field containing "C:\Projects\FinalBuilder\CustomActions\FBASDocumentation.fbap" with a folder icon to its right.
- Stylesheet**: A text field containing "C:\Projects\FinalBuilder\CustomActions\QuickHelp.xsl" with a folder icon to its right.
- Output folder**: A text field containing "C:\Projects\FinalBuilder\CustomActions\Output\" with a folder icon to its right.

Options

- Relative path to css file**: A text field containing "Info.css".
- ☐ **Generate output for each action**

At the bottom of the dialog are three buttons: "OK", "Cancel", and "Help".

Create Action Studio Documentation

Action Studio Project

The path to your ActionStudio based action package

Stylesheet

The XSLT stylesheet used to transform the xml to the desired html file

Output folder

The output location

Options

Relative path to css file

Specify the path to the .css file you want to use for the html. The default .css file is the same one used by the other actions.

Generate output for each action

This will generate a new file for each action found in the .fbap
