FileSet Refresh Action
The FileSet Refresh action simply re-runs the process to find files specified in the FileSet. When the FileSet Define action runs it processes the FileSet at that time, but at a later point in the build it may be necessary to Refresh the FileSet as files may have changed (eg. more files added, files deleted, attributes changed, etc.)

Refresh

FileSet

The fileset that is to be refresh to reflect what is currently present on disk.
