### FileSet

Specify the FileSet to use

### Options

#### FB Variable

Specify the variable which will be used to output the file listing

### Quoting

Specify the quoting style to use, either none, double quotes, single quotes or use the FileSet default (from the FileSet Define action)

## Separator

Specify the separator to use if multiple files are in the FileSet. If the specific separator you want to use is not listed, then use the Other and fill in the Separator Character box with the character(s) you want to use. You may also specify to use the default separator defined for the FileSet

**Use fileset default**
