Export Registry Key Action
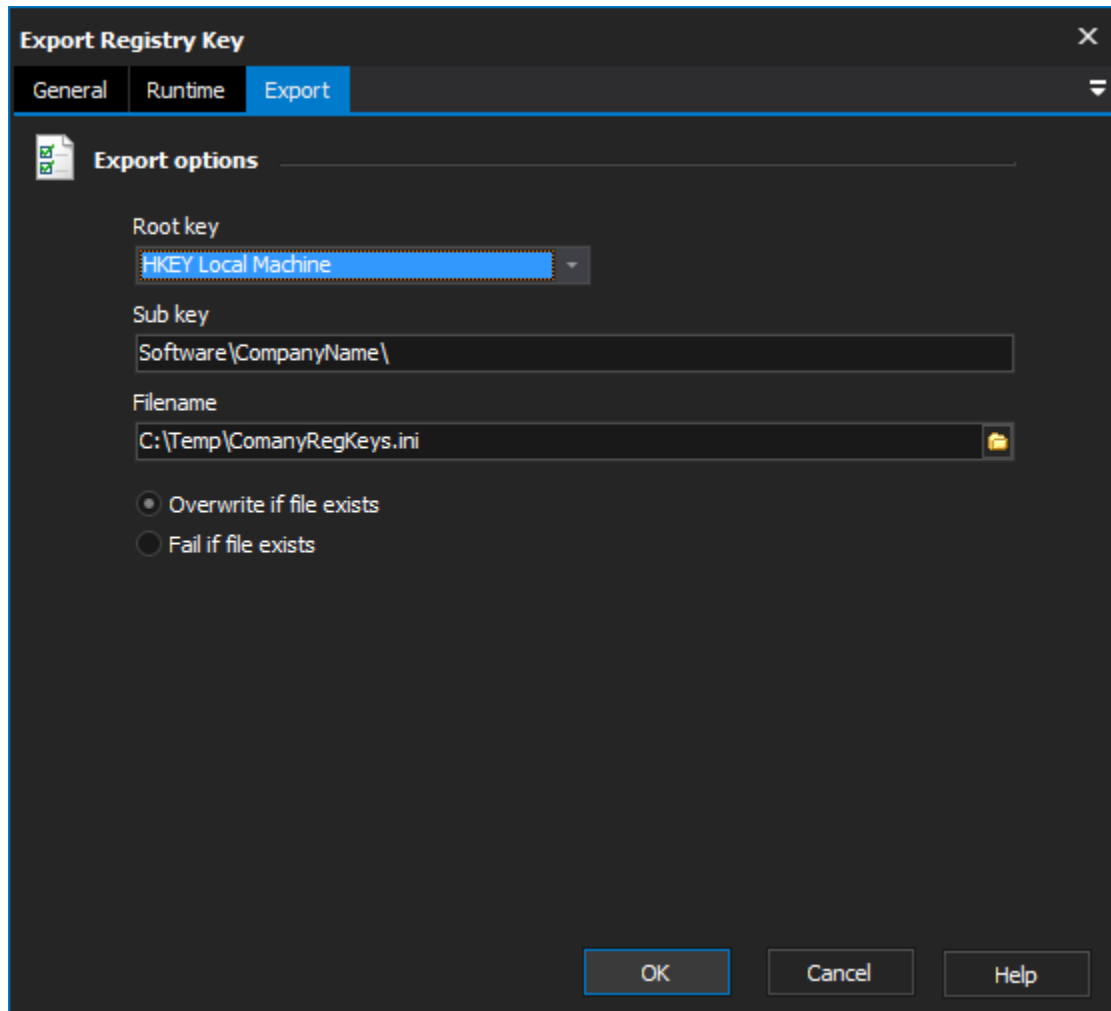

The Export Registry Key action enables you to export a registry key as registration (.reg) file.

Export

Export options

Root key

The root key of path that is to be exported. Possible keys are 'HKEY Local Machine', 'HKEY Current User', 'HKEY Classes Root', 'HKEY Users' and 'HKEY Current Config'.

Sub key

The remaining path to the key that is to be exported. For example 'Software\Microsoft\Windows'.

Filename

The registration file that the key will be exported to.

Overwrite if file exists

If the file, selected for exporting the key into, already exists the action will simply overwrite it.

Fail if file exists

If the file, selected for exporting the key into, already exists the action will report as failed when this option is turned on.
