

Read Ini File Action

This action allows you to read values from an ini file into FinalBuilder variables.

Details

The screenshot shows the 'Read Ini File' dialog box with the 'Details' tab selected. The dialog has a title bar with a close button. Below the title bar are three tabs: 'General', 'Runtime', and 'Details'. The 'Details' tab contains the following fields and controls:

- IniFile options**: A section header with a folder icon on the left and a notepad icon on the right.
- Ini file:** A text field containing '%ProjectRoot%\VersionInfo.ini' with a folder selection button to its right.
- Section:** A text field containing 'VersionInfo'.
- Value name:** A text field containing 'MajorVersion'.
- Value type:** Three radio buttons: 'String' (selected), 'Boolean', and 'Integer'.
- Expand variables in value:** A checkbox that is currently unchecked.
- variable:** A dropdown menu showing 'L_Version'.
- Default value:** A text field containing '0'.
- Buttons:** 'OK', 'Cancel', and 'Help' buttons at the bottom right.

IniFile options

Ini file

The Fully qualified path to the ini file.

Section

The ini File section where the value name is found.

Value name

The name of the value to read

Variable type

Variable

The name of the FinalBuilder Variable to read the value into.

Default value

The default value to use if the value name is not found in the ini file.
