

Write Ini File Action

This action allows you to write values to an ini file.

Details

The screenshot shows a 'Write Ini File' dialog box with three tabs: 'General', 'Runtime', and 'Details'. The 'Details' tab is selected. Under the heading 'INI file options', there are several input fields and options: 'INI file:' with the value '%ProjectRoot%\VersionInfo.ini', 'Section:' with the value 'VersionInfo', 'Value name:' with the value 'MajorVersion', 'Value type:' with radio buttons for 'String' (selected), 'Boolean', and 'Integer', 'New value:' with the value '%Version%', a checkbox for 'Delete entry if blank' which is unchecked, and a checkbox for 'Allow file creation' which is checked. At the bottom right are 'OK', 'Cancel', and 'Help' buttons.

IniFile options

Ini File

The Fully qualified path to the ini file.

Section

The ini File section where the value name is found.

Value name

The name of the value to write

Value type

The type that should be used to write the variable into the INI file. This will determine if quoting is required, or if the new value meets the validation requirements of the type selected.

New value

The value to write to the ini file. You can use FinalBuilder variables here.

Delete entry if blank

If selected and the new value is blank, the entry selected in this action will be removed from the INI file.

Allow create

Allow the ini file to be created if it does not already exist.
