

Nullsoft NSIS Action

The Nullsoft Installer action enables you to automate building Nullsoft Installer projects.

NSIS (Nullsoft Scriptable Install System) is a tool that allows programmers to create installers for Windows. It is released under an open source license and is completely free for any use.

Options

The screenshot shows the 'Nullsoft Installer' dialog box with the 'Options' tab selected. The 'NSIS script file' is set to 'C:\Projects\SimpleProject\Build\Build.nsi'. The 'Options' section includes a 'Verbosity' dropdown set to 'Errors and Warnings', an unchecked checkbox for 'No config (disable inclusion of nsiconf.nsh, use nsisconf.nsi instead)', and a table for 'Add symbols to the globally defined list'. The table has two columns: 'Define' and 'Value'. Below the table are 'Add' and 'Delete' buttons. The 'Log options' section has an 'Output to log file' checkbox and a text field for the log file path, 'C:\Projects\SimpleProject\Logs\Build.log'. At the bottom are 'OK', 'Cancel', and 'Help' buttons.
