

# Convert HTML To MHT File Action

This Action will take an HTML file and convert it to a .MHT file. An .MHT file is a Multipurpose Internet Mail Extension HTML (MHTML) which is basically an archived Web Page. All relative links in the Web page are remapped and the embedded content is included in the .MHT file. The absolute references or hyperlinks on the web page remain unchanged and the .MHT file can then be viewed using Internet Explorer.

## Options

The screenshot shows a dialog box titled "Convert HTML to .MHT File" with a close button (X) in the top right corner. Below the title bar are three tabs: "General", "Runtime", and "Options", with "Options" being the active tab. The dialog contains two main sections. The first section, labeled "HTML file to convert" with a folder icon, has a text field containing the path "C:\Products\SimpleProject\Help\OnlineHelp\_Main.html" and a browse button (folder icon). The second section, labeled "File name for the .MHT file." with a disk icon, has a text field containing the path "C:\Products\SimpleProject\Help\MHT\OnlineHelp\_Main.mht". At the bottom of the dialog are three buttons: "OK", "Cancel", and "Help".

### HTML File to Convert

The name of the HTML file on disk to convert to MHT

### File Name for the .MHT file

The destination MHT file will be written to this file name.
