# Unload IIS Application Action - [IIS 5]

The Unload IIS Application actions allows you unload a given IIS web application from memory.

Server

IIS server

Use global server settings from IIS options

Server

Virtual Directory

Web site

Index

Name

Select a web site, as per the [Website Selection tab](#). Choose "update automatically" to have the virtual directory list automatically update as you change web sites.

Virtual directory

Virtual directory

Choose the virtual directory which hosts the application that you wish to unload. You can set the action not to fail if the application is already unloaded.

Fail if already unloaded

Recurse unload

Select "Recursive Unload" to recursively unload applications in all child directories.
