

Delete FTP Site Action - [IIS 6]

[FinalBuilder Professional Edition]

The Delete FTP Site Action allows you to remove an existing IIS FTP site.

Specify the Server to connect to, and the FTP site to delete, via the [FTP Site Selection](#) tabs, respectively.

Server

The screenshot shows a dialog box titled "Delete IIS 6 FTP Site" with a close button (X) in the top right corner. The dialog has four tabs: "General", "Runtime", "Server" (which is selected and highlighted in blue), and "FTP Site". Below the tabs, there are two main sections. The first section, "IIS server", is preceded by a server icon and contains a checkbox labeled "Use global server settings from IIS FTP options" which is checked. Below this checkbox is a text box labeled "Server:". The second section, "Authentication", is preceded by a lock icon and contains two radio buttons. The first radio button is selected and labeled "Use global credentials from IIS Options". The second radio button is labeled "Use these credentials:" and is not selected. Below the radio buttons is a group box containing two text boxes: "User name:" and "Password:". Below the "Password:" text box is the text "(Leave both blank to use current Windows authentication)". At the bottom of the dialog are three buttons: "OK", "Cancel", and "Help".
