

# PDF Merge Files Action

[FinalBuilder Professional Edition]

The PDF Merge Files action will merge two PDF files into a new single PDF File.

## Merge Options

The screenshot shows the 'PDF Merge Files' dialog box with the 'Merge Options' tab selected. The dialog has a title bar with a close button. Below the title bar are three tabs: 'General', 'Runtime', and 'Merge Options'. The 'Merge Options' tab contains the following sections:

- PDF files to merge**: A section with a folder icon. It contains two file input fields:
  - File 1**: `C:\Projects\RestAPI\Help\ExternalCommands.pdf`
  - File 2**: `C:\Projects\RestAPI\Help\InternalCommands.pdf`
- Output file**: A section with a folder icon. It contains one file input field:
  - Output file**: `C:\Projects\RestAPI\Help\AllCommands.pdf`
- Options**: A section with a document icon. It contains three checkboxes:
  - ☐ Include outlines
  - ☐ Include form fields
  - ☐ Rename likename fields

At the bottom of the dialog are three buttons: 'OK', 'Cancel', and 'Help'.

## PDF files to merge

### File 1

### File 2

The files to merge

## Output File

The name of the new PDF file

## Options

### Include Outlines

Include the outlines from the source files in the new PDF file

### Include Form Fields

Include Form Fields from the source files in the new PDF file

**Rename Likename Fields**

Rename any field names which are the same in the two source files in the merged file.
