

Stack or Queue Push Item Action

[FinalBuilder Professional Edition]

The Stack/Queue Push Item action is used to push one or more items into the list.

OK Cancel Help

Stack/Queue name

Select the name of the list which you want to add new items to. If there aren't any items in this list, you need to use the [Stack or Queue Define Action](#) to create a new list.

Items to push

Expand variables before push

If you specify variables as part of the text to push, eg. %MyVariable% then selecting this option will expand the variables before the item is pushed onto the list.

Push a separate item for each line

This option allows you to choose if you want a new item on the list for each line, or if you want multi-line items. In the above example, a separate item will be pushed on the queue for "a", "b", and "c". If this option was unchecked, a single item "aAndlt;crLfAndgt;bAndlt;crLfAndgt;cAndlt;crLfAndgt;" would be pushed onto the queue.

The Item

Specify the item(s) to be pushed onto the list in the memo box
