

# String Replace Action

The String Replace action enables you to replace either all occurrences or the first occurrence of a string, with a new string.

 For more advanced text replacement options, see the [Text Find & Replace Action](#).

## Input And Output

## Input

### From variable

Select existing variable to use.

### Specify value

Input a new value to use.

## Output

### Apply to existing variable

Output changes to variable used.

### Specify output variable

Output changes to specific variable.

## String Replace Options

### String replace options

#### Search String

The string to find within the input.

#### Replacement String

The string used to replace found string.

#### Replace All

This option will force the action to iterate over the entire input string, until no matches are found. By default this action will only replace the first match.

#### Scripting Info

The Action properties available are :

property InputString : string;// The input string, if not using a variable

property OutputVariable: string;// The Output Variable name

property ApplyToInput : boolean;// Apply the changes to the input variable, only valid if using an input variable

property UsingInputVariable : boolean;// True if using an input variable, not input string

property InputVariable : string;// Input variable name

```
property SearchString : string;// String to search for
property ReplacementString : string;// The replacement string
property CaseSensitive : boolean;// True to perform case sensitive search, otherwise false
property ReplaceAll: boolean;// True to iterate through entire string, otherwise false
```
