

# Accurev Create Snapshot Action

The AccuRev Create Snapshot action enables you to create a new static stream (Snapshot), based on an existing stream.

The screenshot shows the 'AccuRev Create Snapshot' dialog box with the 'Snapshot Options' tab selected. The dialog has a title bar with a close button (X) and a tab bar with 'General', 'Runtime', 'Snapshot Options', and 'Server Options'. The 'Snapshot Options' tab contains a section titled 'Snapshot options' with a document icon. Below this are four text input fields: 'Workspace (Leave blank to use default workspace)' with a folder icon on the right, 'Snapshot name', 'Backing stream', and 'Base time'. At the bottom right are three buttons: 'OK', 'Cancel', and 'Help'.

## Workspace

The local path to the workspace.

## Snapshot Name

The name of the new snapshot. Must begin with a non-digit character and cannot contain slashes.

## Backing Stream

The existing stream which the new snapshot will be based on.

## Base Time

The date at which to take the snapshot. The snapshot will only contain the elements that were in backing stream on this date.
