Git Delete Branch Action

The Git Delete Branch action allows you to delete branches from a local repository. This action is a wrapper for the git command line. For more information on the use and options for this action, refer to the git branch command line documentation.

To delete a branch or branches enter the path to a local git working folder for the Local repository and specify the Branch name(s).

Remotes [remotes]		
	OK Cancel	Help

Local repository - Path to the working folder of the local git repository.

Branch name - A list of one or more branch names to be deleted- one per line.

Quiet - Suppress output from git.

Verbose - Verbose output from git.

Force - Allow deletion of branches irrespective of their merged status, or whether they even point to a valid commit.

Remotes - Also delete the remote-tracking branches.

For more information on deleting a branch in git, see the git branch command line documentation.
