

Sourcegear Vault Actions

These actions support SourceGear Vault 1.2 or higher. They provide an easy to use wrapper around the Vault command line tool. Before using these actions you need to check that the path to the Vault command line tool is set in the FinalBuilder Options Dialog. FinalBuilder will attempt to find the path automatically however it is not always possible (depends on your installation).

? Unknown Attachment

The default server and security options can be overridden in the individual actions.
