Run DOS Command Action

The Run DOS Command allows you to execute any native DOS command or batch file.

For executing programs (including console programs), use the Execute Program Action (unless you wish to redirect console output to a file with '>'.)

Command

The full command to execute, including any parameters and output redirection.

Start In

The directory in which to execute the command.

Wait For Completion

Program exit code must be...

Log Output

HideWindow

All of these properties are identical to the XCopy) cannot have their output captured.
