

Git Delete Branch Action

The Git Delete Branch action allows you to delete branches from a local repository. This action is a wrapper for the git command line. For more information on the use and options for this action, refer to the [git branch command line documentation](#).

To delete a branch or branches enter the path to a local git working folder for the **Local repository** and specify the **Branch name(s)**.

Git Delete Branch

General Runtime **Delete Branch**

Delete Branch

Local repository
I:\Repositories\Git\Git Test

Branch name (each entry on a new line)
f-database-performance
t-testing-serialisation

Options

☐ Quiet [--quiet] ☐ Verbose [--verbose]

☒ Force [--force]

☐ Remotes [--remotes]

OK Cancel Help

Local repository - Path to the working folder of the local git repository.

Branch name - A list of one or more branch names to be deleted- one per line.

Quiet - Suppress output from git.

Verbose - Verbose output from git.

Force - Allow deletion of branches irrespective of their merged status, or whether they even point to a valid commit.

Remotes - Also delete the remote-tracking branches.

For more information on deleting a branch in git, see the [git branch command line documentation](#).
