

# **\_Inc\_AutoMat\_Target**

## **Target**

### **Auto-configure**

This is the recommended way to configure this property page. When you click on the "Click Here..." button, FinalBuilder is hidden and Find Control dialog is displayed.

While you search, FinalBuilder will place a red highlight rectangle around the control which is currently under the mouse pointer.

Navigate to a point over the control that you want to choose for the action, and Control-Click to select it. All of the other fields on the property page will be populated with a description of the control. In most cases, this is all you need to create a reproducible description of the target control.

However, you can fine tune the selection by editing each field on the property page. This is described in the Manual Configuration topic.

### **Target process**

The name of the process that will be searched for to perform the mouse click on.

#### **Number**

The occurrence of the process that the mouse click will be performed. This is important as there may be multiple copies of the same application running at the same time.

### **Target control**

#### **Window by class and/or caption**

Instructs the action that the windows class and caption options should be used in determining which control to select when performing the click.

#### **Window class**

The name of the windows class that the control is an instance of. Note that wildcards are allowed to help to enable a broader selection of controls.

#### **Caption**

The display text shown on the control. Again wildcards work within this option value.

#### **Control from description**

Instructs the action to use the description when determining which control to click. The description entered will be matched to the display text of the controls in the selected process.
