

Reset Variable To Default

The Reset Variable to Default action resets a variable to its default value.

Reset Variable

Reset Variable to Default

General Runtime **Reset Variable**

Variable name

Variable currently has no default value (default is blank.)

OK Cancel Help

Variable Name

Choose a variable to reset to its default value. If the variable currently has a default value, it will be displayed in the window.

You can reset variables which do not have default values - the variable will be set to blank.
