

MSI Generic Action

Automise[Automise Professional Edition]

The MSI Generic action enables you to modify an existing MSI database file using standard SQL statements against the internal tables.

Generic Options

The screenshot shows the 'MSI Generic' dialog box with the 'Generic Options' tab selected. The dialog has a title bar with a close button (X) and a maximize button. Below the title bar are three tabs: 'General', 'Runtime', and 'Generic Options'. The 'Generic Options' tab contains the following elements:

- Generic options**: A section header with a small icon of a computer and a document.
- MSI File**: A text input field with a file selection icon (floppy disk) on the right.
- SQL statement**: A large text area for entering SQL statements.
- Set variable to output**: A section header with a small icon of a document and a pencil.
- Output variable**: A dropdown menu for selecting a variable to store the output.
- Buttons**: 'OK', 'Cancel', and 'Help' buttons at the bottom right.

Generic options

MSI File

The location of the MSI file to manipulate using the SQL Statement.

SQL Statement

The statement to be executed against the MSI database.

Set variable to output

Example SQL Statements

Change the Product Name to 'Sample Product':

```
UPDATE Property SET Value='Sample Product' WHERE Property='ProductName'
```

Change the Dialog Font to 'Courier':

```
UPDATE TextStyle SET FaceName='Courier', Size='10' WHERE TextStyle='DlgFont8'
```
