

Windows Installer - Reinstall Action

The Windows Installer - Reinstall action enables the reinstallation of an application installed by a windows installer package.

Options

The screenshot shows the 'Windows Installer - Reinstall' dialog box with the 'Options' tab selected. The dialog has a title bar with a close button (X) and a tab bar with 'General', 'Runtime', 'Options', and 'WMI Connection'. The 'Options' tab is highlighted. Below the tab bar, there is a section titled 'Reinstall options' with a document icon. The 'Reinstallation mode' is set to 'Reinstall only if files are missing' in a dropdown menu. There are two radio buttons: 'MSI Setup file' (selected) and 'Application name'. The 'MSI Setup file' option has a text field with a file explorer icon on the right. The 'Application name' option has a text field. At the bottom, there are three buttons: 'OK', 'Cancel', and 'Help'.

Reinstall options

Reinstallation Mode

The type of reinstallation to be performed.

MSI Setup File

The setup file used to install the application. The setup file does not need to be accessible by the computer which the application is being uninstalled on, as it is only used to get the products identification number.

Application Name

The name of the application to uninstall. If more then one application is found with the same name, only one of the applications will be uninstalled.
