

Prompt For File Or Directory Action

The Prompt for File or Directory action enables you to ask the user to specify a file or directory during your build. The file or directory specified is saved in a variable so that it can be used in subsequent actions. For more information on variables, including creating your own project and user variables, see [here](#).

This action should not be used in unattended builds as it will cause them to hang waiting for user input. By default, interactive actions are not available from [Async Action Groups](#).

Prompt For File Or Directory
