

Backup IIS Metabase Action - [IIS 5]

The Backup IIS Metabase action creates an incremental backup of the IIS metabase configuration.

You can access existing metabase backups from inside IIS Manager, by right-clicking on the Computer name and choosing "All Tasks->Backup/Restore Configuration".

Metabase

The screenshot shows a dialog box titled "Backup IIS Metabase (IIS 5)". It has three tabs: "General", "Runtime", and "Metabase", with "Metabase" being the active tab. Below the tabs, there is a section titled "Backup IIS metabase" with a folder icon. Under this section, there are two input fields: "Server:" with the value "localhost" and "Backup name:" with the value "backup_%BackupDate%". At the bottom of the dialog, there are three buttons: "OK", "Cancel", and "Help".

Backup IIS metabase

Server

Specify the name of the server you wish to back up.

Backup name

Specify the name you wish to give the backup. Multiple backups with the same name will be given incremental backup version numbers (ie Automise IIS Backup 0, Automise IIS Backup 1, Automise IIS Backup 2...)
