Pool Properties

The screenshot shows a Windows-style dialog box titled "Create Application Pool (IIS 6)". It has four tabs: "General", "Runtime", "Server", and "Pool Properties", with the last one being selected and highlighted in red. Below the tabs, there is a section titled "Application pool properties" with a small globe icon. Inside this section, there is a label "Application pool ID" followed by a text input field containing the text "wikiAppPool". Below the input field is a checkbox labeled "Fail if application pool ID already exists", which is currently unchecked. At the bottom of the dialog, there are three buttons: "OK", "Cancel", and "Help".

Application pool properties

Application Pool ID

The identifier to associate with the new Application Pool.

Fail if Application Pool ID already exists

Performs a check on the server to see whether an existing application pool has the same identifier.
