

# Start, Stop or Recycle Application Pool Action - [IIS 7]

The Start / Stop / Recycle Application Pool enables you to start, stop or recycle an existing application pool on an IIS server.

## Server

The screenshot shows a Windows-style dialog box titled "Start / Stop / Recycle Application Pool (IIS 7)". It has four tabs: "General", "Runtime", "Server" (which is selected and highlighted in red), and "Application Pool Options".

Under the "Server" tab, there are two main sections:

- IIS server (IIS 7)**: This section contains two radio buttons. The first is "Use the hostname specified in the global IIS options." and the second is "Provide the hostname of the IIS server." Below these is a text field labeled "Hostname:". A note below the field says "Leave blank to connect to the local machine."
- Credentials (IIS 7)**: This section also contains two radio buttons. The first is "Use the credentials specified in the global IIS options." and the second is "Provide the credentials to the IIS server." Below these are two text fields: "Username:" and "Password:". A note below the "Username" field says "Leave blank to use the credentials of the logged in user."

At the bottom of the dialog box, there are three buttons: "OK", "Cancel", and "Help".

## IIS server

Use the hostname specified in the global IIS options

Provide the hostname of the IIS server

## Credentials

Use the credentials specified in the global IIS options

Provide the credentials to the IIS server
