

SFTP Download Files Action

Use the SFTP Download Files action to download multiple files SFTP server. To download a single file, it's easier to use the [SFTP Download File Action](#) action.

Download Options

The screenshot shows the 'SFTP Download Files' dialog box with the 'Download Options' tab selected. The dialog has three tabs: 'General', 'Runtime', and 'Download Options'. The 'SFTP connection' section has a dropdown menu set to 'SFTPConnection' and a checkbox for 'Reconnect if disconnected'. The 'Source/Destination' section includes fields for 'Remote path' (set to 'Logs\'), 'Remote mask' (set to '*. *'), and 'Local path' (set to 'C:\Projects\Log\'). There is also a 'Case sensitive' checkbox. The 'Options' section has checkboxes for 'Recursive' (checked) and 'Ascii mode', a 'Case conversion' dropdown set to 'None', and a 'Download mode' dropdown set to 'Overwrite'. At the bottom are 'OK', 'Cancel', and 'Help' buttons.

SFTP connection

Reconnect if disconnected

Source/Destination

Remote Path

Specify the remote path on the SFTP Server. The path must be specified from the user's home directory as the SFTP protocol doesn't have the concept of a "current directory" like FTP does.

Remote Mask

Specify a file mask to select the files on the remote server. Use the case sensitive option to only match files that are in the same case as the file mask.

Case sensitive

Local Path

Specify a local directory where the files will be downloaded to.

Options

Recursive

To recursively download files from child directories turn this flag on.

Ascii mode

Case Conversion

To convert the filenames to either lowercase or uppercase choose the corresponding option, otherwise choose "None" to leave the filenames as-is.

Download Mode

Select what should be done if a file already exists on the local machine with the same name. Select either: Overwrite, Skip, Append, or Resume.
