

INI File Iterator Action

The IniFile Iterator action enables you to repeat a set of steps for each section or each value in a section of an INI file.

The action can work in two modes: Section Iterator, or Section Values Iterator. In Section Iterator mode, the child actions will be called for each section that exists in the specified INI file. In the Section Values mode, the child actions will be called for each Name=Value within the specified section of the INI file.

Details

The screenshot shows the 'Ini File Iterator' dialog box with the 'Details' tab selected. The 'Ini file' field contains the path 'C:\Projects\SimpleProject\Src\'. The 'Options' section has two radio buttons: 'Iterate sections' (unselected) and 'Iterate section values' (selected). Under 'Iterate section values', there are three fields: 'Section:' with the value 'Commands', 'Variable for name:' with the value 'L_File', and 'Variable for value:' with the value 'L_Command'. The 'OK', 'Cancel', and 'Help' buttons are at the bottom.

Field	Value
Ini file	C:\Projects\SimpleProject\Src\
Iterate sections	<input type="radio"/>
Iterate section values	<input checked="" type="radio"/>
Section:	Commands
Variable for name:	L_File
Variable for value:	L_Command

Ini File

Specify the INI file to read

Options

Iterate Sections

Iterates for each section found in the INI file.

Variable

Iterate Section Values

You need to specify which section in the INI file, and then the action will iterate for each Name=Value pair found in the specified section

Section

Variable for name

Variable for value
