

Generate Random Number Action

The Generate Random Number action allows you to generate a random number. The random number can either be a integer in the specified range, or a floating point number.

The screenshot shows a dark-themed dialog box titled "Generate Random Number" with a close button (X) in the top right corner. Below the title bar are three tabs: "General", "Runtime", and "Details", with "Details" being the active tab. The dialog is divided into two main sections. The first section, "Random number type", is preceded by a calculator icon and contains two radio buttons: "Integer" (selected) and "Real". Below the "Integer" radio button are two spinners: "Lower range (minimum value)" set to 0 and "Upper range (maximum value)" set to 100. The second section, "Options", is preceded by a document icon and contains a label "Save random number to variable" above a dropdown menu currently showing "L_File". At the bottom of the dialog are three buttons: "OK", "Cancel", and "Help".

Details

Random Number Type

Integer

This option will generate a whole number between 0 and the maximum specified.

Lower Range

Upper Range

Real

This option generates a floating point number between 0 and 1

Options
