☒ Include system variables

☒ Include action comments

☒ Include script events

☒ Show document in browser after generating

XSLT stylesheet

(Leave blank to use default stylesheet)

XSLT parameters

Parameter	Value

OK

Cancel

Help

The XSLT Stylesheet option allows you to use your own custom stylesheet to control the format of the output. If this field is left blank the default stylesheet (<install directory>\Stylesheets\CreateProjectSummaryFromProject.xsl) will be used.

The XSLT Parameters allow you to pass custom parameters to your stylesheet.
