

Stack or Queue Log Items Action

[Automise Professional Edition]

The Stack/Queue Log Items action is used to output all the items in the list into the log (the action does not modify the list in any way).

Log Items

The screenshot shows a dialog box titled "Stack/Queue Log Items" with a close button (X) in the top right corner. Below the title bar are three tabs: "General", "Runtime", and "Log Items", with "Log Items" being the active tab. The main area of the dialog has a label "Stack/Queue name" followed by a text input field containing "OurStack". To the right of the input field is a small icon of a stack of books. At the bottom of the dialog are three buttons: "OK", "Cancel", and "Help".

Stack/Queue name

Select the name of the list which you want to log the values of. If there aren't any items in this list, you need to use the [Stack or Queue Define Action](#) action to create a new list.

Example

Below is an example of the log output of a queue that contains 3 items, "a", "b", and "c".
