

String Concatenation Action

The String Concatenation action allows you to join two strings together.

Input And Output

The screenshot shows the 'String Concatenation' dialog box with the 'Input and Output' tab selected. The dialog has four tabs: 'General', 'Runtime', 'Input and Output' (active), and 'Concatenation Options'. The 'Input' section has two radio buttons: 'From variable' (selected) and 'Specify value'. The 'From variable' option has a dropdown menu showing 'L_Directory'. The 'Specify value' option has a text input field. The 'Output' section has two radio buttons: 'Apply to existing value' (selected) and 'Specify output variable'. The 'Specify output variable' option has a dropdown menu. At the bottom are 'OK', 'Cancel', and 'Help' buttons.

String Concatenation

General Runtime **Input and Output** Concatenation Options

Input

☒ From variable

L_Directory

☐ Specify value

Output

☒ Apply to existing value

☐ Specify output variable

OK Cancel Help

Input

From variable

Select an existing string to join.

Specify value

Input a new string to use.

Output

Apply to existing variable

Output the changes to the original variable.

Specify output variable

Output the changes to an existing variable.

Concatenation Options

Concatenation options

String to add

The string that will be added to the input string.

Beginning of String

The string will be added to the beginning of the input string.

End of String

The string will be added to the end of the input string.

Specify Index

The string will be added after the specified number of characters. If the specified value is longer than the input string, the string will be added to the end.
