

Control Service Action

[Automise Professional Edition]

This action allows you to control the state of a windows service on the local machine or a remote machine.

? Unknown Attachment

Click on the Select service to choose which service to control. By default the registered services of the local machine are listed, to change this either type the name of the computer or select from the drop down list (click on load to get a list, this is not done automatically as it can be slow in a large network) and then click on the Refresh Services button.
