# Execute Powershell Script Action

The Execute Powershell Script action enables you to execute a Windows Powershell script. The script can be defined in the action or in a script file.
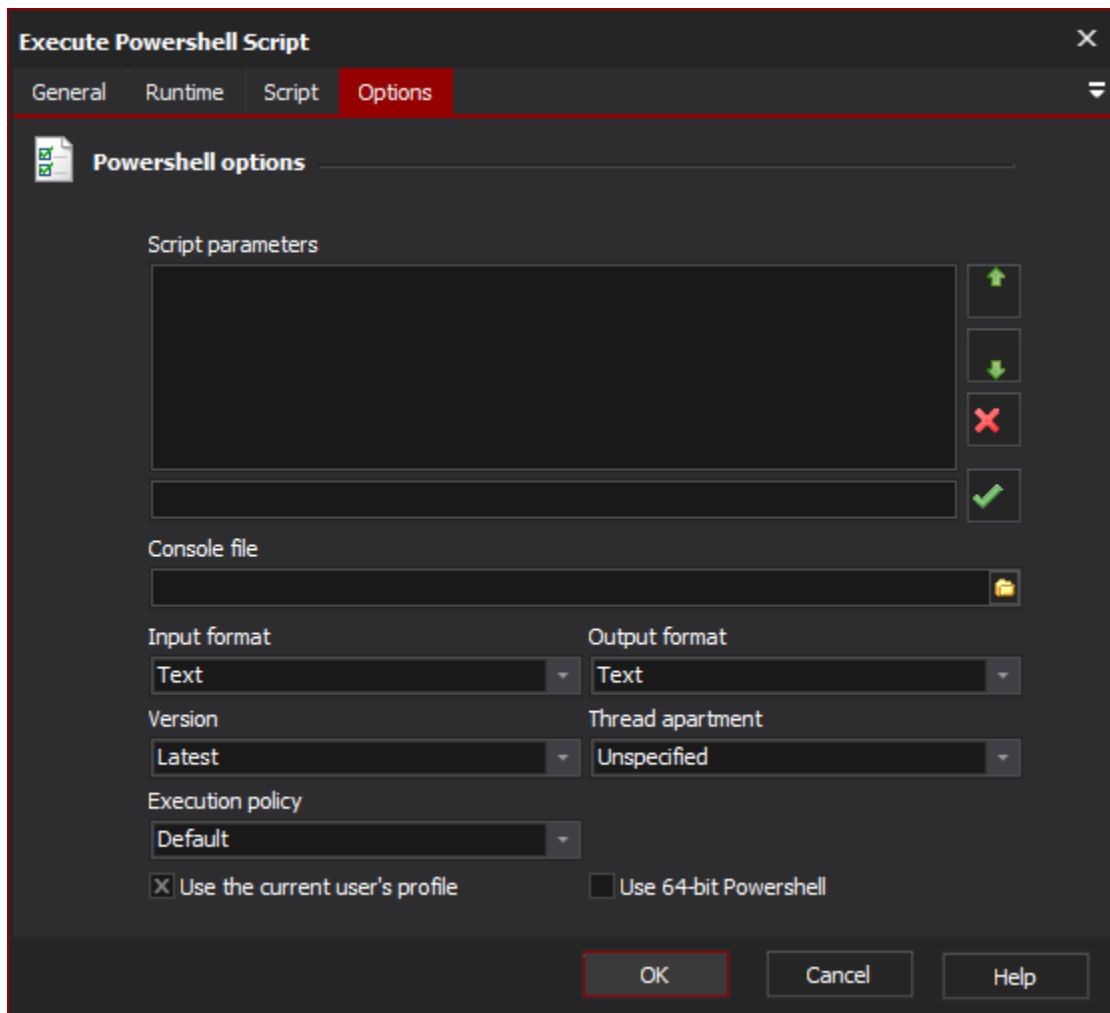

For more information see:

Filename

The full path to the script to be executed.

Script

The Powershell script block to be executed.

Script Parameters

The arguments passed to the script. The arguments are passed into the script in the order that they appear in the list.

Console File

The console file to be loaded into the Powershell instance.

Input Format

The format of the data being sent to Windows Powershell.

Output Format

The format of the data being received from Windows Powershell.

Use the current user's profile

Determines whether the user's profile will be loaded into the Powershell instance.
