## XML File 1, XML File 2

Specify the XML files or [documents](#) to merge from.

## Output File

Specify the file to write to.

## XPath

The TargetNode XPath option allows you to specify the node where the Source2 document will be inserted.

The Source 3 Fragment XPath option allows you to specify a document fragment to merge rather than the whole document.

## MSXML Parser Page

Allows you to set some options to be used when the parser loads the XML. See the [XML Parser Options](#) topic for details.
