

# Extract XML Fragment Action

This action extracts an xml document fragment from a source xml document and saves it as a new xml document.

**Extract XML Fragment**

General Runtime **Extract XML Fragment** MSXML Parser

**XML files**

☐ XML source file

☒ XML document

☐ Output to file

Overwrite if file already exists

☒ Output to variable

**Fragment XPath**

OK Cancel Help

## XML Files

Specify a source file (or document), and a destination file to write the fragment to.

## Fragment XPath

Specify the XPath to the nodes you wish to extract.

## MSXML Parser Page

Allows you to set some options to be used when the parser loads the XML. See the [XML Parser Options](#) topic for details.
