

# Transform XML Action

This action performs an XSL Transform using the Microsoft XML parser.

**Transform XML**

General Runtime **Transform XML** Transform Options MSXML Parser

**XML file**

☐ XML source file

☐ XML document

ConfigOptions

☐ Preserve white space

**XSLT and output file**

XSLT File

C:\Project\Build\PettyPrintVersion.xsl

Output file

C:\Project\Build\PettyPrintVersion.html

☐ Overwrite if file already exists

**XSLT parameters**

Parameter	Value

+ Add - Delete

OK Cancel Help

## XML Source File

Specify an XML file or [document](#) to read from.

## XSLT and Output File

Specify the XSLT to use for the transform, and the output file to write to.

## XSLT Parameters

The XSLT Parameters allows you to provide dynamic values (such as build numbers etc) to your stylesheet. These can be used to alter the output of the transform.

## MSXML Parser Page

Allows you to set some options to be used when the parser loads the XML. See the [XML Parser Options](#) topic for details.
