

NuGet Delete Action

The NuGet actions in Continua are a wrapper around the nuget command line. If you're having trouble using any of the NuGet actions, please refer to the [Command Line Reference](#).

The NuGet Delete action provides the ability to remove a package from a NuGet Server.

NuGet Delete

NuGet Delete Action

NuGet Delete Settings Options Environment Comments

Required Field

NameNuGet Delete []

☒ Enabled

Package IDMyPackage

The ID of the NuGet package you want to delete.

Version1.0

The version of the NuGet package you want to delete.

API Key29ab48e3-c3dd-90cd-a944-93c1ad63e892

The API key required to delete the package. It's recommended you put this value in a variable. If left blank, then any key specified in the config file will be used. [-ApiKey]

Help

Name

A friendly name for this action (will be displayed in the [actions workflow area](#)).

Enabled

Determines if this action will be run within the relevant stage.

Package Id

The Id of the package to remove.

Version

The version of the package to be removed.

API Key

The API Key for the NuGet server which this package is being removed from. [-ApiKey]

Command Line Version

Select the version of the NuGet command line that is installed on the agent. Some other settings and options may be unavailable depending which the command line version is selected.

Using

The Using drop down is populated with any property collector whose namespace matches the pattern defined by the NuGet Delete action. The pattern for this action is [^NuGet.*](#)

If you create a property collector for this action, make sure you select the **Path Finder Plugin** type and give it a name that will match the pattern above in blue. Example names listed [here](#), search the table's Plugin column for "NuGet Delete".

For more in-depth explanations on property collectors see [Property Collectors](#).

Alternatively, you can select the **Custom** option from the Using drop down list and specify a path in the resulting input field that will be displayed. Please read [Why it's a good idea to use a property collector](#) before using this option.

Help

Environment Variables

Multiple environment variables can be defined - one per line. These are set before the command line is run.

Log environment variables

If this is ticked, environment variable values are written to the build log.

Generate system environment variables

Tick this checkbox to set up a list of new environment variables prefixed with 'ContinuaCI.' for all current system expression objects and variables.

Mask sensitive variable values in system environment variables

This checkbox is visible only if the 'Generate system environment variables' checkbox is ticked.

If this is ticked, the values of any variables marked as sensitive will be masked with **** when setting system environment variables. Clear this to expose the values.
