# Delete Action

## Delete

**Name**

A friendly name for this action (will be displayed in the actions workflow area).

**Enabled**

Determines if this action will be run within the relevant stage.

**Root Directory**

The root directory to use when searching for files to delete.

**File Names / Patterns**

Provide file names/patterns to files you want deleted. Each file/pattern must be specified on a single line and must be relative to the root directory specified in the Root Directory field.

You can exclude files by prefixing the file name or pattern with a dash. e.g -*.ignore. Exclude patterns always take precedence over include patterns

More information about pattern wild cards can be found on the Ant Pattern Usage page.

**Log each deleted item**

If a file is deleted, write it to the Build Log.

**Ignore warnings**

If this is ticked, any warnings logged will not mark the action with a warning status.
