

HipChat

The HipChat publisher allows Continua CI to send notifications to HipChat users or rooms.

HipChat

New Notification Publisher

Publisher

HipChat

Options

Required Field

API URL

https://xxxxx.hipchat.com

The base url of the HipChat service.

API Token

A personal access, user, room notification or add-on API token.

Subscription Types

☒ Users and groups☒ Rooms

Specify whether subscriptions can be sent only to users and groups, only to rooms, or to both.

Default Room

Specify the default room name (or room id) for this publisher. This can be overridden when creating a subscription or in user preferences.

Help

API URL

The address of your team, department or company in HipChat cloud or on your private server.

API Token

We recommend that you generate a personnel token for your user account in the HipChat administration [personal access token](#) page. Alternatively you can create a room notification token under the admin area for your team.

Enabled Subscription Types

Subscriptions can be set up to send notifications to a specific user, a group of users or a Stride conversation (either directly between users or as a room). Tick the subscription types that are allowed for this publisher.

Default Room

Specify the default room name or id to use when setting up a subscription for this publisher. This can be overridden when setting up a room subscription.

Options

Required Field

All Notification Types

☐ HTML message format by default

Specify if the default message format for this publisher should be HTML rather than text. This can be overridden in user preferences.

☐ Notify

Whether messages should trigger a notification (change the tab color, play a sound, notify mobile phones, etc). Note that each recipient's notification preferences are taken into account.

Room Notifications

From Label

Continua CI

A label to show after the sender account name.

☐ Send as card

Specify whether room notifications should be sent as a card using the card message template.

Help

HTML message format by default

Specify whether the default message format for this publisher should be HTML rather than text. This can be overridden in user preferences.

Notify

Tick this to specify that messages should trigger a notification (change the tab color, play a sound, notify mobile phones, etc). Note that this takes into account the notification preferences in the recipient's HipChat user account.

From Label

A label to show after the senders account name above the HipChat message

Send a card

Tick this to use the Card notification template to send a room notification as a [HipChat card](#).
