

Build Durations Object

The build durations object **Duration** is used by the **\$Build** object and provides access to a set of time periods associated with a build.

Name	Description	Type	Usage Example	
OnQueue	The period of time that the build has been in a Queuing status.	TimeSpan	\$Build.Duration.OnQueue\$	"986 milliseconds"
Running	The period of time that the build has been running on an agent, calculated by totalling the differences between the each stage start time and finished time.	TimeSpan	\$Build.Duration.Running\$	"953 milliseconds"
SinceFirstStageStart	The period of time since the first stage of the current build started running on an agent, until the time build finished or the current time	TimeSpan	\$Build.Duration.SinceFirstStageStart\$	"968 milliseconds"
Total	The total period of time since the build was created, until the time build finished or the current time	TimeSpan	\$Build.Duration.Total\$	"1 second"
