

# NuGet Push Action

 The NuGet actions in Continuum are a wrapper around the nuget command line. If you're having trouble using any of the NuGet actions, please refer to the [Command Line Reference](#).

The Nuget Push action is used to publish a NuGet package to a NuGet Package Feed.

## NuGet Push

NuGet Push Action

NuGet Push

Settings

Options

Environment

Comments

Required Field

Name

NuGet Push []

☒ Enabled

Package

SWorkspace\$\nuget\_output\package.nupkg

Specify the path to the package.

API Key

29ab48e3-c3dd-90cd-a944-93c1ad63e892

The API key for the server. It's recommended you put this value in a variable. If left blank, then any key specified in the config file will be used.

Command Line Version

Latest

Using

NuGet.Default

Help

### Name

A friendly name for this action (will be displayed in the [actions workflow area](#)).

### Enabled

Determines if this action will be run within the relevant stage.

### Package

Determines the location of the nupkg file.

### API Key

The API Key for the NuGet server which this package is being published to.

### Command Line Version

Select the version of the NuGet command line that is installed on the agent. Some other settings and options may be unavailable depending which the command line version is selected.

### Using

The Using drop down is populated with any property collector whose namespace matches the pattern defined by the NuGet Push action. The pattern for this action is [^NuGet.\\*](#)

If you create a property collector for this action, make sure you select the **Path Finder Plugin** type and give it a name that will match the pattern above in blue. Example names listed [here](#), search the table's Plugin column for "NuGet Push".

For more in-depth explanations on property collectors see [Property Collectors](#).

Alternatively, you can select the **Custom** option from the Using drop down list and specify a path in the resulting input field that will be displayed. Please read [Why it's a good idea to use a property collector](#) before using this option.

Configuration File

C:\Program Files\MyApp\nuget.config

A specific NuGet configuration file to use. If omitted, %appdata%\NuGet\nuget.config is used. [-ConfigFile]

Source

http://www.myserver.com/nuget

Specify the URL for the server to push to. If not specified, the action will fail, unless the DefaultPushSource value is set in the NuGet config file. [-Source]

☐ Exclude symbols

If this option is ticked, any existing symbols package will not be pushed to a symbol server. [-NoSymbols]

Symbol Server

Specify the symbol server URL. If not specified, nuget.smbsrc.net is used when pushing to nuget.org. [-SymbolSource]

Symbol API Key

29ab48e3-c3dd-90cd-a944-93c1ad63e892

The API key for the symbol server. It's recommended you put this value in a variable. [-SymbolApiKey]

☐ Skip duplicate packages

If a package and version already exists, skip it and continue with the next package in the push, if any. [-SkipDuplicate]

☐ No service endpoint

Don't append 'api/v2/packages' to the source URL. [-NoServiceEndpoint]

☐ Disable buffering

Disables buffering when pushing to an HTTP(s) server to decrease memory usage. [-DisableBuffering]

Help

### Environment Variables

Multiple environment variables can be defined - one per line. These are set before the command line is run.

### Log environment variables

If this is ticked, environment variable values are written to the build log.

### Generate system environment variables

Tick this checkbox to set up a list of new environment variables prefixed with 'ContinuaCI.' for all current system expression objects and variables.

### Mask sensitive variable values in system environment variables

This checkbox is visible only if the 'Generate system environment variables' checkbox is ticked.

If this is ticked, the values of any variables marked as sensitive will be masked with \*\*\*\* when setting system environment variables. Clear this to expose the values.
