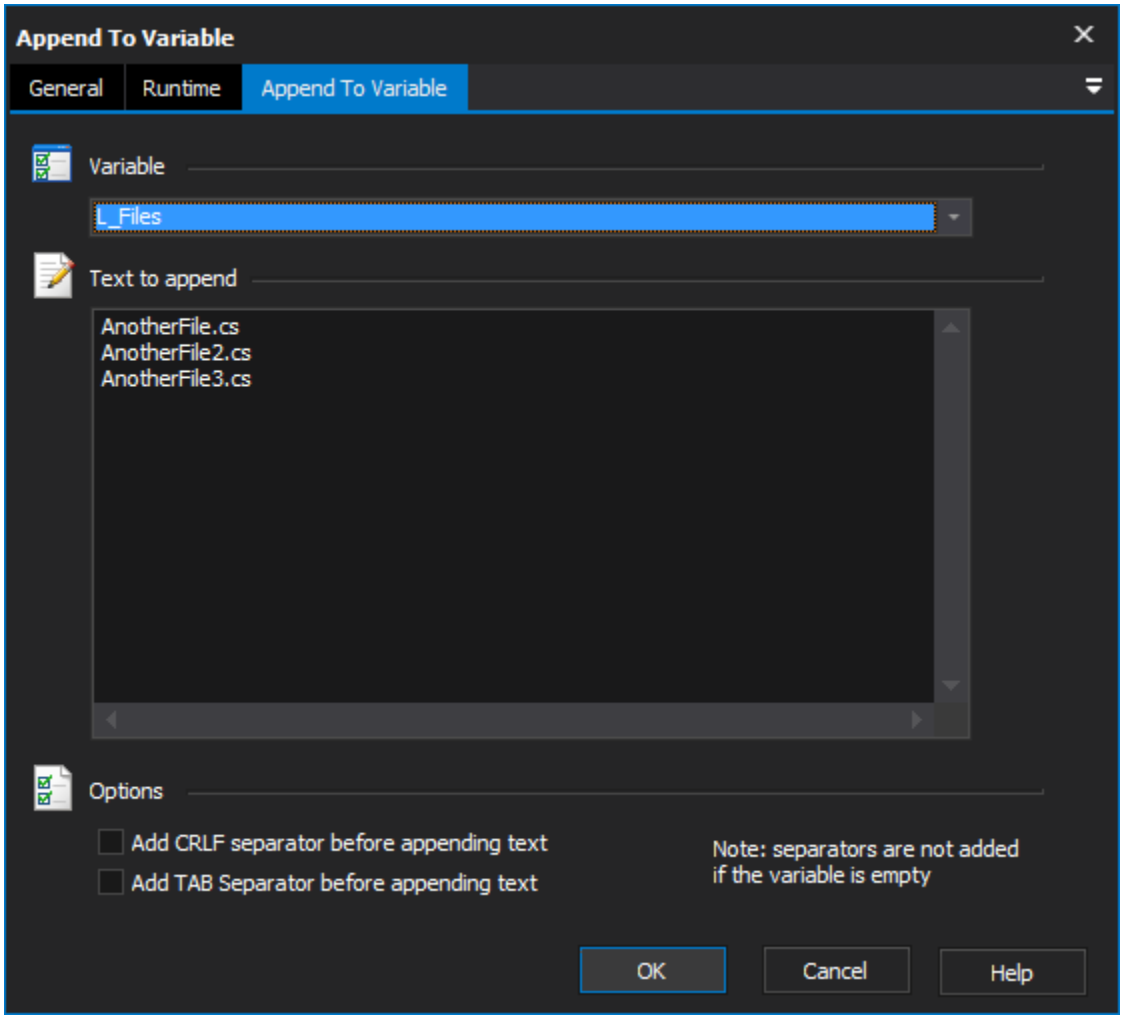
Append To Variable Action

The Append to Variable actions allows you to add more text to the end of a variable, as well as adding a carriage return/linefeed (CRLF) and/or a Tab character to separate the new value.

This action is useful to build up a list of items for use in a List Iterator Action action, or writing lines to a text file.

Append To Variable



Variable

The variable to update, the new value will be added to the end of the existing value.

Text to Append

This is the text which will be appended to the existing variable. FB Variables in this field will be expanded.

Options

Add CRLF separator

Carriage Return and Line Feed characters will be inserted before the text is appended (if the existing value is not empty).

Add TAB separator

A tab character will be inserted before the text is appended (if the existing value is not empty).
