Getting Started

Once Continua has been configured successfully you can access Continua through any major browser with **http://<hostname>:<server_port>**. Both <hostname> and <server_port> were values that were set during the install process.

Once Continua has loaded you will need to create an initial user that will be a Continua Administrator.

After an administrator has been created, you will need to create a project and configuration to get started with Continua. Check out our Tutorials for an in depth guide on getting your first project and configuration up and running.
